

PROBLEM

My skin is sun damaged and I'm looking for a skin-care treatment that won't cause pain or require down-time. What do you suggest?

SOLUTION

OMNILUX Revive is the latest revolutionary breakthrough in skin rejuvenation. This harmless non-surgical light therapy does not work in the same way as laser or IPL (intense pulsed light), it's a non-invasive, photo-facial for sun damaged or ageing skin.

Omnilux Revive is a completely painless, pure non-laser light source, that is not an ultraviolet or infra-red light. It uses the red light part of the natural white light spectrum, which complements the skin's own natural moisture renewal process by deeply hydrating and plumping the skin.

An Omnilux Revive treatment is a truly relaxing 20-minute experience, which involves lying down comfortably underneath the light. With your eyes

shut, the warmth of the light is reminiscent of being bathed in sunshine. While your face is surrounded by thousands of light-emitting diodes radiating pure red light, the therapist may perform a soothing reflexology foot massage.

The benefits of Omnilux Revive are like those achieved from a good facial massage, only much deeper. Omnilux Revive perfectly complements good skin-care, as it both prolongs and enhances the effects. While a course of nine is recommended, many people notice clearer, brighter and smoother skin after just one treatment.
